

# SOLUTION OVERVIEW

DARIA offers an AI-powered research assistant with dynamic interview capabilities, real-time transcription, and automated UX artifact generation. The system combines natural conversation flow with structured research methodology, providing instant persona creation and journey mapping while maintaining research integrity. The interface seamlessly integrates voice interaction and text analysis, ensuring comprehensive data collection and insights generation. Additionally, it provides automated analysis and visualization tools for tracking research patterns and findings, enhancing the efficiency and scalability of UX research processes.
